Environmental Policy

As BFA, we have established, integrated, and effectively operate our Environmental Management System in line with internationally recognized environmental management standards, with the aim of ensuring environmental sustainability across all our operations. We regard the reduction of environmental risks, continual enhancement of our environmental performance, and the establishment of a sustainable balance between our business objectives and environmental responsibility as a fundamental principle.

Our Environmental Management System encompasses practices aimed at the efficient use of natural resources, improved energy efficiency, prevention or minimization of waste generation, and the elimination of pollution at its source. By embedding environmental sensitivity into our operational processes, we remain committed to the continual improvement of our environmental performance.

In line with this policy, we encourage all employees and stakeholders to be part of a corporate culture that is environmentally responsible, and we adopt the continuous improvement of our environmental performance as an integral component of our organizational culture.

Within this framework, we hereby commit to:

- Ensure full compliance with legal requirements and other applicable obligations, contribute to environmental development, and maintain effective collaboration and communication with all stakeholders within our value chain in the regions where we operate,
- Implement Environmental Management System practices in accordance with international standards and ensure they are accessible and understandable to all employees and stakeholders, thereby fostering environmental awareness, engagement, and compliance,
- Adopt, promote, and support best practices for the efficient use and sustainability of natural resources and the protection of biodiversity,
- Prioritize pollution prevention as a core principle and promote practices aimed at minimizing the adverse environmental impacts of our operations,
- Reduce waste generated from our activities at its source wherever possible, prioritize recycling and recovery options, and ensure safe disposal without harming the environment where these are not feasible,
- Embrace a responsible approach to combating climate change and take actions to reduce our carbon footprint,
- Assess the environmental impacts of our products and services throughout their life cycle and develop more sustainable solutions,
- Plan, implement, and regularly review preventive and corrective measures to minimize environmental impacts in the event of an accident or emergency,
- Review environmental performance through measurable indicators and conduct continuous improvement activities.
